CONIFER
HEALTH SOLUTIONS ®

Get Complete Visibility into the Cost of Care

Turning your information into business intelligence with best-in-class technology, robust data and interactive dashboards

HELPING YOU:

- Identify areas of opportunity in your population's resource and network usage so you can better manage performance

- Manage the cost of care and improve the performance of risk-based contracts

- Manage your network structure based on how your spend compares to benchmarks in similar plans or markets

YOUR BUSINESS CHALLENGE

As healthcare expenditures continue to rise, understanding and managing the cost of care is more urgent than ever. The only way organizations can reduce costs is by identifying and analyzing data quickly and accurately. You need a tool that lets your team evaluate and address high-cost utilization trends from physician, hospital and patient perspectives. The challenge lies in how effectively you aggregate data to identify risks and drive actions to create positive change.

WHAT WE OFFER

ConiferCore™ Financial Risk Intelligence helps you manage the cost of care and improve your performance against risk-based contracts. We begin by aggregating information for a comprehensive view of your providers and members. Through our cutting-edge technology and proprietary data analytics, data is converted into actionable information, which enables you to determine areas of over and underutilization. ConiferCore™ Financial Risk Intelligence provides you with a series of visual, interactive, and easy-to-understand dashboards, including our Healthcare Utilization Dashboard, which allows you to manage your network structure based on the care demanded from the population, management of out-of-network costs, and benchmarks of performance to similar organizations. Our dashboards:

- Provide views of performance, category of care, and network spend

- Consolidate key performance indicators that guide decision making around network optimization, contract and incentive design, and utilization management

- Drill down to view all contracts, lines of business, period of time, division or sub-market, or single contract

- Identify stress points, manage risks, and save hours of time in waiting for analysts to run and interpret reports, allowing you to understand the drivers of cost in real time

HOW WE'RE DIFFERENT

Committed to the high-performance network

We help identify the demands on the provider network to better manage the infrastructure and optimize performance. Enhanced monitoring and opportunity assessment assist in controlling costs and manage financial incentives among the stakeholders.

Benchmark performance against your peers

Our tool allows you to benchmark key measures to compare hospital and physician performance with your peers. Peer comparison reports highlight strengths and weaknesses of the provider network by category of care, specialty and individual physicians.

Manage your network based on healthcare utilization

Our utilization dashboard enables you to manage your network structure based on utilization patterns and provide care more effectively for your population. Utilization is analyzed by category of care to determine the highest needs based on volume, network utilization, and cost of services in order to benchmark a population.

Ensure data consistency and streamlined processes

Current provider information, patient eligibility, benefit design, utilization management and other information is easily accessed through our systems and analytics engine. A dedicated team of data specialists continually monitor and assist in addressing exceptions to ensure consistent data quality. To support compliance with payer requirements, we've developed a set of business rules to check for appropriate bill type, location of service and procedure codes.

Experience-based, turnkey solutions

Conifer Health provides a comprehensive, robust and fully-integrated Value-Based Care solution, leveraging our consulting, implementation and operational expertise.
